                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      q
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             임
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present sequence is that of a full-length cDNA encoding Arabidopsis that chalana chorismate mutase-2 (CM), an enzyme that catalyses the conversion of chorismate to prephenate in a branch of the shikimate pathway leading to phenylalanine and tyrosine biosynthesis. CM is essential for plant growth; inhibition of CM gene expression in plant seedlings results in severe chlorosis, reduced growth and development abnormalities. The invention provides compositions for the modulation of plant growth or development using CM antisense (see ABA91400) and sense polymucleotides, double-stranded RNA and ribozymes, and related expression cassettes and vectors. The compositions are particularly useful for the modulation and inhibition of plant growth, and for sense is also a target for the identification of herbicides, and methods are provided for using CM in the identification of herbicide candidates. Methods are also provided for identifying compounds that stimulate the expression or function of CM. These can be used to promote growth and

The invention discloses isolated polynucleotides encoding chorismate mutase polypeptides. Aromatic amino acids must be included in the diets of animals. In the aromatic amino acids must be included in the diets of animals. In the aromatic amino acid biosynthesic polymented to anthranilate during tryptophan biosynthesis and is converted to prephenate, the branch point for tyzosine and phenylalanine to prephenate. Also disclosed are methods for selecting an isolated polymucleotide that affects the level of expression of a tyrosine polymetric enzyme polypeptide in a host cell, obtaining a mucleic acid fragment encoding a tyrosine biosynthetic enzyme polypeptide and evaluating compounds for their ability to inhibit the activity of a tyrosine biosynthetic enzyme. The polypeptides can be used produce antibodies. Chorismate mutase and prephenate dehydrogenase are good tyrosine biosynthetic enzyme. The polypeptides can be used produce antibodies. Chorismate mutase and prephenate dehydrogenase are good targets for herbicides that will not affect animals, and overexpression of those enzymes may be used to increase the content of aromatic amino of these enzymes may be used to increase the content of aromatic amino of these caps. The polypeptides may also be used to design and/or identify inhibitors of those enzymes that may be used as herbicides. The mutase content cand physical mapping of the genes amazers for trains to those genes. The sequence presented is a soybean chorismate mutase expressed sequence tag (BST)

array or probes representative of the plant cell genome, and (b) detecting a profile of expressed polynucleotides in the plant cell characteristic of a stress response. The method is useful in the production of transgenic plants, cells and seeds and in producing plants with increased tolerance to abiotic stress. The present sequence is that of an Arabidopsis thaliana stress regulated gene (ABZ12196-ABZ17574) used in methods of the invention. Note: The sequence data for this patent is not represented in the printed specification but is based on sequence information supplied to Derwent by the European Patent Office

The present sequence is that of a full-length cDNA encoding Arabidopsis thaliana chorismate mutase-1 (CM), an enzyme that catalyses the conversion of chorismate to prephenate in a branch of the shikinate pathway leading to phenylalanine and tyrosine biosynthesis. CM is essential for plant growth; inhibition of CM gene expression in plant seedlings results in severe chlorosis, reduced growth and developmental abnormalities. The invention provides compositions for the modulation of plant growth or development using CM antisense (see ABA91399) and sense polynucleotides, double-stranded PNA and ribozymes, and related
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ટ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Identifying compounds useful for modulating and inhibiting plant growth and development, by using chorismate synthase and chorismate mutase as targets which are essential for plant growth.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          expression cassettes and vectors. The compositions are particularly useful for the modulation and inhibition of plant growth, and for generating male sterile plants or plants that produce seedless fruit. C is also a target for the identification of herbicides, and methods are provided for using CM in the identification of herbicide candidates. Methods are also provided for identification compounds that stimulate the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    used to promote growth and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              AspSerGlyAsnValTyrThrLeuAlaSerValArgGluAspLeuValArgGlnGluAsp
                                                                                                                                                                                                                                                                                                                                                                                                CM;

```
specific for Arabidopsis that an anticonstruction of the catalyses the conversion of chorismate prephenate in a branch of the shikimate pathway leading to phenylalanine and tyrosine biosynthesis. It is essential for plant growth, inhibition of CM gene expression in plant shedlings results in severe chlorosis, reduced growth and developmental abnormalities. The invention provides compositions for the modulation of plant growth or development using CM antisense and sense polynucleotides vectors. The compositions are particularly useful for the modulation and inhibition of plant growth, and for generating male sterile plants or plants that produce seedless fruit
                                                                 Identifying compounds useful for modulating and inhibiting plant growth and development, by using chorismate synthase and chorismate mutase as targets which are essential for plant growth.
                                                                                                                                                                                                                 The present sequence is that of an antisense oligonucleotide that

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention discloses isolated polynucleotides encoding chorismate mutase polypeptides. Aromatic amino acids must be included in the diets of animals. In the aromatic amino acid biosynthetic pathway chorismate is converted to anthranilate during tryptophan biosynthesis and is converted to prephenate, the branch point for tyrosine and phenylalanine biosynthesis. Chorismate mutase catalyses the conversion of chorismate to prephenate. Also disclosed are methods for selecting an isolated polymoclocide that affects the level of expression of a tyrosine biosynthetic enzyme polypeptide in a host cell, obtaining a nucleic acid fragment encoding a tyrosine biosynthetic enzyme polypeptide and evaluating compounds for their ability to inhibit the activity of a tyrosine biosynthetic enzyme. The polypeptides can be used produce antibodies. Chorismate mutase and prephenate dehydrogenase are good

targets for herbicides that will not affect animals, and overexpression of these anizymes may be used to increase the content of aromatic amino acid in food crops. The polypeptides may also be used to design and/or identify inhibitors of those enzymes that may be used as herbicides. The muclaic acids may be used or create transgenic plants, as probes for the genetic and physical mapping of the genes and as markers for traits inked to those genes. The sequence presented is a rice chorismate mutase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         297

                                                                                                                                                            ð
                                                                                                                                                                                                                                     8
                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention discloses isolated polynucleotides encoding chorismate mutase polypeptides. Aromatic amino acids must be included in the diets of animals. In the aromatic amino acids must be included in the diets converted to anthranilate during tryptophan biosynthesis and is converted to prephenate, the branch point for tyrosine and phenylalanine biosynthesis. Chorismate mutase catalyses the conversion of chorismate to prephenate. Also disclosed are methods for selecting an isolated polymenter and affects the level of expression of atyrosine polymeptide in a host cell, obtaining a nucleic acid fragment encoding a tyrosine biosynthetic enzyme polypeptide and a vost cell, obtaining a nucleic acid fragment encoding a tyrosine biosynthetic enzyme polypeptide and evaluating compounds for their ability to inhibit the activity of a tyrosine biosynthetic enzyme. The polypeptides can be used produce antibodies. Chorismate mutase and prephenate dehydrogenase are good targets for herbicides that will not affect animals, and overexpression of those enzymes may be used to increase the content of aromatic amino acid in food crops. The polypeptides may be used to design and/or identify inhibitors of those enzymes that may be used to design and/or identify inhibitors of those enzymes that may be used to design and/or increase class and as markers for the genetic and physical mapping of the genes and as markers for traits
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     416
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   296

The present sequence is that of a full-length cDNA encoding Arabidopsis thaliana chorismate mutase-3 (CM), an enzyme that catalyses the conversion of chorismate to prephenate in a branch of the shikimate pathway leading to phenylalanine and tyrosine biosynthesis. CM is essential for plant growth; inhibition of CM gene expression in plant seedlings results in severe chlorosis, reduced growth and developmental abnormalities. The invention provides compositions for the modulation of plant growth or development using CM antisense (see ABA91401) and sense polynucleotides, double-stranded RNA and ribozymes, and related expression cassettes and vectors. The compositions are particularly useful for the modulation and inhibition of plant growth, and for generating male sterile plants or plants that produce seedless fruit. CM is also a target for the identification of herbicides, and methods are provided for using CM in the identification of herbicide candidates. Methods are also provided for identification of herbicide candidates.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      development

CM catalyses the conversion of chorismate to prephenate in a branch of the shikimate pathway leading to phenylalanine and tyrosine bisynchesis. It is essential for plant growth, inhibition of CM gene expression in plant seedlings results in severe chlorosis, reduced growth and developmental abnormalities. The invention provides compositions for the modulation of plant growth or development using CM antisense and sense polynucleotides, double-stranded RNA and ribozymes, and related expression cassettes and vectors. The compositions are particularly useful for the modulation and inhibition of plant growth, and for generating male sterile plants or plants that produce seedless fruit
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            10 AspSerGlyAsnValTyrThrLeuAlaSerValArgGluAspLeuValArgGlnGluAsp 29
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Identifying compounds useful for modulating and inhibiting plant growth and development, by using chorismate synthase and chorismate mutase as targets which are essential for plant growth.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

/note="Vector: pBluescript II XR; Site\_1: ECORI; Site\_2:
Xhoi; The maxA was isolated from roots of dlycine max
'Supernod' plants generously donated by Dr. Gary Stacey.
The seedlings were innoculated with Bradyrhizobium
aponicus, strain USDAIIO priot to harvest. Stratagene's
CDNA synthesis Kit (catalog number 200401) was used to
synthesize the CDNA. First-strand synthesis was performed
with S-methyl dCTP, hence the ligated CDNA was
hemimethylated. A modification of Stratagene's
first-strand synthesis primer was used. An 'anchor'
nucleotide (Va-A,C, or G) was added to the 3' end of the
primer [GAGAGAGAGAGAGAACAGACTCGAG(7)18V] to anchor
the primer at the S' end of the poly(A) tract. After
second-strand synthesis, the CDNA ends were filled in with
cloned Pfu DNA polymerase, ligated to EcoRI adapters and
subsequently phosphorylated. The Xhoi site within the
first-strand synthesis primer was then restricted by
digestion with Xhoi; all Xhoi sites in the CDNA
constructs were size-fractionated status. The CDNA
constructs were size-fractionated with a 500bp cutoff,
using GibcoBRL Life Technologies' CDNA Size Fractionation
column. The column eluent was then ligated into
Stratagene's pBluescript II XR Predigested with ECONI
(pBluescript II SK(+) that has been digested with ECONI
white and blue colonies appear to contain recombinant
plasmids with cDNA inserts, based on size (n=25). This
library was constructed by Dr. Paul Keim and Dr. Virginia Contact: Shoemaker R/Public Soybean EST Project

Xho1; The cDNA library was constructed From floral
meristernatic mRNA provided by Dr. Hallina Knap of Clemson
University, Complementary DNA was synthesized from mRNA
using a primer consisting of a poly(dT) sequence with a
Xho1 restriction site. EcoRI adapters were ligated to the
blunt-ended cDNA fragments followed by Xho1 digestion. The
CDNA fragments were directionally cloned into the
EcoRI-Xho1 restriction site of the pBluescript vector. The
ligated cDNA fragments were transformed into DH10B host
cells (GibcoBRL). This library was constructed in the

/note=="Vector: pSPORTI (life Technologies); Site_1: Not I;
Site_2: Sal I: This cDNA library was constructed_from mRNA
isolated from immature seed coats (200-300 mgs) of
greenhouse grown plants. The library was prepared using
the Life Technologies Superscript cDNA library
construction kit. Complementary DNA was synthesized from
mRNA using a poly (dT) sequence with a Not I restriction
site. Sal I linker adapters were ligated to the
blunt-ended cDNA fragments followed by Not I digestion.
The cDNA fragments were directionally cloned into the Not
I-Sal I restriction site of the pSPORTI vector. The
ligated cDNA fragments were transformed into E.coli
ElectroMax BH10B host cells (Gibco BRL). This library was
constructed by Dr. Lila Vodkin and Dr. Anu Khanna."
